Stomp Rocket has been on the road with children for more than 25 years and more than 5 million items sold speak for themselves - the creative, battery-free game offers outdoor fun for children aged 3 and up even in our media-driven times and promotes movement and coordination.

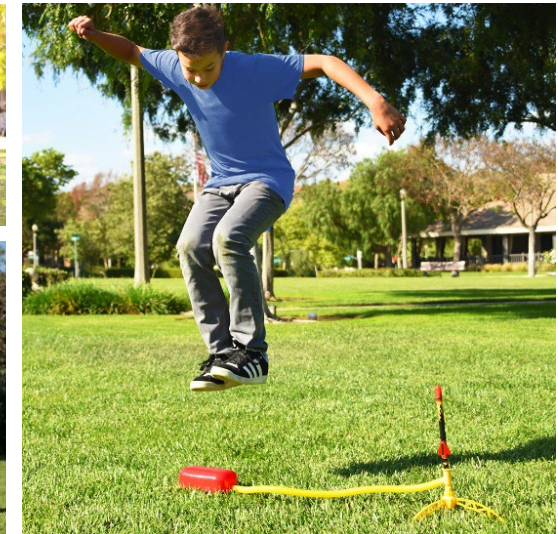

Stomp Rockets convince with an appealing, child-friendly and colorful design, a set consists of only a few components:

- ⇒ Foam Rockets (depending on game version)
- ⇒ Stomp Launcher (fast & easy to assembly)
- ⇒ NO batteries required

The assembly is done by simply plugging the parts together. The foam rockets are attached and you're ready to go: Simply jump onto the launch pad with full force and the Rockets take off. With pure muscle power, the rockets reach a flight altitude of up to 120m.

29.5 cm

21 cm

Refill Packages

- ⇒ Stomp Rocket sets are available in various configurations
- ⇒ Rocket refills are also available in separate refill packs.

The basis for STEM enthusiasm is laid in the early childhood. It is important to support children in their activities and let them experience and learn about STEM fields themselves from the very beginning, ideally with play and a lot of fun.

STEM (Science, Technology, Engineering, Mathematics) are fields that are traditionally and stereotypically associated with tinkerers and, especially, rarely with girls. However, it becomes increasingly clear that such stereotypes are nonsense, and the importance of early nurturing of these MINT skills in our rapidly changing world is evident. Research, technology, and innovation are becoming ever more significant in addressing the major challenges of our time, such as climate change, digital transformation, medical advancements, and more. A solid foundation in natural science and technology education is emerging as a crucial factor in this context.

STOMP ROCKET has been developing its namesake outdoor toy for over 25 years, a product that not only encourages physical activity in our youngest generation outdoors but also very successfully aims to promote STEM (Science, Technology, Engineering, Mathematics) skills. The principle is simple and child-friendly: plastic rockets with foam heads are placed on a launching device connected to a bellows by an air hose.

And now, the fun begins! Kids can race and jump with all their power on the compression pad, propelling the rocket high into the sky using 100% self-generated air pressure. In addition to the tremendous enjoyment, this activity also provides a valuable lesson on how much power ordinary air holds when compressed and harnessed. Furthermore, young rocket scientists must consider wind direction and strength to accurately estimate flight paths.

It's an all-around fantastic toy available in various versions, highly praised and highly recommended by both young rocket scientists and their parents.
